The Fastest Way to Build Spatial Tools

The world runs on maps

Maps and spatial data are everywhere — from cities to supply chains to climate action

Every property is priced with a map

Every energy source location is chosen with a map

Every store location is chosen with a map

Every investment carries spatial risk

Every delivery uses a map

Teams can't collaborate in real-time

Specialists needed for every change

Data trapped in PDFs and spreadsheets

The \$10bn Spatial Bottleneck

The world runs on spatial data - but today it's slow, siloed and inaccessible.

Desktop-first tools in a cloud-first world

Weeks of training just to get started

Software stuck in the 90s

Existing tools: powerful, but unusable for 99% of people

A lot of GIS work isn't conceptually hard - just the software that is horribly designed

WHAT IS ATLAS?

GIS was built for specialists. Atlas is built for everyone.

If you can use a browser,
you can use Atlas.

Everything you need, all in one place

Atlas removes the barriers of GIS — letting anyone design and launch maps, dashboards, and spatial apps in hours instead of months.

Data management

Site ID	Location	Status	Last Update	Assigned to
S-001	Nairobi, KE	Active	12 Aug 2025	J. Mwangi
S-002	Kisumu, KE	Needs Review	10 Aug 2025	L. Otieno
S-003	Eldoret, KE	Completed	07 Aug 2025	P. Kamau
S-004	Mombasa, KE	Auckland	13 Aug 2025	S. Achieng

Dashboard

Mobile app in field

Public-facing form

Tree Planting Form

Track newly planted trees in seconds. Drop location, photo, and species — all in one go

Tree Species

Maple

GPS Location

Find my location

Recommend the top 10 cities to open new stores by combining demographics, competitor locations, and foot traffic.

Score this property for loan risk using flood zones, economic growth and population trends

BUILT WITH AI FIRST

AI that unlocks GIS for the 99%

Atlas AI 10x's the capabilities of non-experts — letting anyone build apps, run analyses, and uncover insights without years of GIS training.

Find the best 50 locations for new EV charging stations using traffic and grid capacity

Show me all households affected by the flood and where to send aid first

AI Agent

What areas in Baltimore are underserved by public transport based on average walking distance to nearest bus stop?

After analyzing Baltimore's public transport network and residential zones, I've identified areas with poor accessibility to public transit based on walking distance to the nearest bus or tram stop.

Isochrone analysis per transport node

Interpolate walkability surfaces

Generate underserved area polygons

Performing tasks...

Ask anything...

History tends to repeat itself

Design changed. Now it's mapping's turn.

From Adobe to Figma

Design used to mean opening clunky Adobe files, saving v1_final_FINAL.psd, and emailing it around. Then in 2016, Figma launched — browser-based, real-time, multiplayer by default.

It made design feel like Google Docs. No more installs, no more version chaos. Anyone could jump in, comment, and collaborate. It didn't just beat Adobe. It changed how teams worked.

From ESRI to Atlas

GIS used to mean clunky ESRI software, desktop installs, and weeks of waiting for maps. Then in 2025, Atlas happened — browser-based, real-time, and built for teams.

Like Figma did for design — Atlas did for GIS. Fast, collaborative spatial work. Anyone could jump in, edit, share, and decide. It didn't just modernize GIS. It made it work like the rest of the web.

and we're chasing the largest monopoly in software

\$3B revenue, 50+ years old — still dominating the GIS market.

MARKET SIZE

The opportunity isn't GIS — it's the unbuilt layer of spatial tools

Most companies don't think they use maps.
But they all have spatial data — and that's where
the real growth begins.

ARC Advisory Group reports that ESRI has 43% GIS market share and a revenue of \$1.5bn.
An estimated 15% of global businesses (45 million) have location data they're not using.

\$10 bn

Traditional GIS

ATLAS

Team built for this exact moment

We learned GIS the hard way: in outdated systems at university. Now, as ambitious builders we're creating the tool for the modern age.

11 A-players

Shipping big features
every single day

Raised \$2M pre-seed

Backed early by world-
class investors

Makes it work

Sets the course

Brings it to market
